BIZ OS

software designed to simplify & elevate small business

Web Order is setup and processing orders in an HOUR not WEEKS or MONTHS

The Biz_OS Sync App updates the online pricing, pictures, descriptions, item out list, assigned modifier windows and their respective modifier items directly from Digital Dining.

No more managing the POS menu and online menus separately.

Jeff Petersen, Owner & Developer of Biz_OS was a Digital Dining customer on and off for the last 15 years as a former restaurant owner, multi-unit operator and VP of finance, IT and HR at a multi-concept group.

FEATURES

The Biz_OS : Web Order module is easy to deploy and configure.

- Menu syncing at a click of a button.
- Menu item and window descriptions are entered into the memo fields of menu item setup and window setup.
- Theoretically, after the initial configuration you would NEVER have to login to make menu related changes, unless you were adding or deleting an entire POS window. Just run the Sync App after changes are made in Digital Dining.
- Fully branded ordering site.
- Biz_OS handles the credit card processing. The POS is notified of the payment via Web Services. No more price and payment discrepancies
- Credit card approval & gateway activation takes 24 – 48 hours upon receipt of the signed application.
- Partial or whole refunds and receipt reprinting.
- Summary and transactional reporting by location or group of locations.
- Customers create one account for use with all locations in a multi-unit group with access to their historical data.

SPEED

The initial menu import takes 90 seconds via the Biz_OS Sync App.

- Biz_OS Web Order configuration averages 15-20 minutes.
- The average configuration and menu/modifier cleanup is about 60 minutes per site.

REQUIREMENTS

Bis_OS Digital Dining Dealer requirements:

- DD webservice 2.0 to be installed, running and accessible from a Static WAN IP.
- A port to be forwarded to the DD Server.
- Headless POS running.
- Biz_OS Sync App to be installed on the server.
